WORK EXPERIENCE

SOFTWARE ENGINEER

SCT-Bangla | Dec 2019 – Dec2021

I worked for SCT-Bangla Limited, which is a sister concern of Schertech and operates in Brixen, Italy. In total, six teams of developers from here were working to rebuild and upgrade their existing systems. I worked on AngularJS and the PHP platform.

PROJECTS OVERVIEW

Furnace Warning

Using Node.js, build a script that determines the temperature of the furnace then send an email to the responsible person, if a furnace goes out of the given temperature range and stays for certain amount of time.

Client Management System

Using AngularJS framework and PHP, build a custom client management system which does have login and registration functionalities along with different user permission.

Machine Auto Logout

Using PHP, build a script that gets all the machine's shifts and then check & logged out automatically if there is any employee logged in an expired working shift.

Missing Doc List

Using PHP, build a script that gets all the missing converted documents that were supposed to convert into PDF.

Employee Statistics

Using PHP, build a script that gets all the machine and worker data then return a working hour summary of the last 3 months.

Website of the company

Using WordPress, build the Main Website (<https://www.schertech.com>) of the Company while following a fully customizes design.

Re-Designing webpage

Got the chance to re-design almost every web-pages based on the given design by our UI-UX team.
